## ABSTRACT:

An international cash-on-delivery (I-COD) system for completing a transaction between a seller in a first country and purchaser in a second country, wherein the seller has agreed to exchange packaged goods for a payment from the purchaser. The international delivery system includes a delivery service system, a payment system and an information system. The delivery system physically handles delivery of the packaged goods, including import and export clearing, and holding of the packaged goods in escrow at an intermediate location until payment by the purchaser. The payment system handles the flow of funds including receiving payment from the purchaser, holding the payment in escrow and distribution of the payment to the seller upon delivery of the packaged goods. The information system electronically coordinates escrow aspects of both the delivery service system, and the payment system, so as to minimize the risk of the transaction to both the seller and the purchaser.

DOCUMENT-IDENTIFIER: US 20030040947 A1

TITLE: International cash-on-delivery system and method

Summary of Invention Paragraph:

[0005] PCT Publication WO 00/52555 to Stroh discloses a trade financing system that employs modified bills of exchange for international trade in goods and services. The buyer executes a bill of exchange, which is a payment draft, and submits the bill of exchange to the seller along with an order for a traded product. The bill of exchange is made payable to the seller, or the seller's agent. The seller obtains a verification of the creditworthiness of the draft, and upon receiving verification, the seller ships the traded product. The bill of exchange is "event-triggered" and becomes negotiable upon release of the traded product to the control of the buyer. Notice of the triggering event includes a receipt of verification of the shipment via the electronic tracking capabilities of the carrier. Once the triggering event is satisfied, the draft becomes negotiable, through conventional banking or other financial channels, for the full value of the traded product, less any fees and discounts charged for processing.

Summary of Invention Paragraph:

[0006] The seller is protected by not having to ship the goods until receipt of, and credit verification of, a payment draft in the form of a bill of exchange executed by the buyer. The bill of exchange protects the purchaser by being latent until a triggering event occurs, such as release of the traded product by the transportation company into the control of the buyer. However, execution of payment documents by the buyer, and the full demonstration of readiness to pay to the seller before the seller ships the goods, delays the shipping process. In addition, the draft is a full contractual agreement that must be signed by both parties before the transaction is complete, and must later be negotiated to obtain a cash payment. Such complexities slow the transaction process, and render use of the bill of exchange undesirable for less sophisticated buyers and sellers.

## ABSTRACT:

A system and method is provided for linking a Rolling Spot Currency contract with a Principle Market Maker program. In one aspect of the invention, the system includes an electronic brokerage and trading network having at least one computer coupled to receive and transmit bids and offers for international currency trading; a display terminal and input; and a principal market maker computer coupled to the electronic brokerage and trading network wherein the principal market maker computer is operative to receive and transmit the bids and offers and execute international currency trades by maintaining a market for such currencies. In another aspect of the invention, the method includes the steps of receiving and transmitting bids and offers for publicly traded currencies; storing the received bids and offers in a

memory; identifying and executing the matching bids and offers; and identifying unmatched bids and offers and providing a complementary trade to maintain a market for such currencies.

## ABSTRACT:

A system, method and article of manufacture are provided for account settlement utilizing a network. First, a buyer is allowed to select from a group of options in order to settle an account utilizing a network. The options include settling a minimum balance, partially settling, settling a full balance, and applying for an import loan on payment due date. The selected option is then received utilizing the network. Finance interest may then be booked against the buyer for an unpaid portion of the account if the selected option includes either settling a minimum balance or partially settling. If the selected option includes settling a full balance, the account may be reconciled. On the other hand, if the selected option includes applying for an import loan on payment due date, an import loan may be booked and a credit line may be transferred to a trade loan line.

ABSTRACT:

A system and method of collecting payments uses an automated system to generate a draft, payable to the creditor and drawn on the payor's checking account, pursuant to the payor's authorization. The draft is then executed by the debt collector as authorized signatory for the payor, and deposited into the payee's account to complete payment. The automated system has a simple input screen which receives the necessary information for generation of the draft, which may be read to the system operator over the telephone by the authorizing payor. The system verifies the bank and account information by comparing the input information to records in a database associated with the system. Optionally, the system may also generate an inquiry to the bank to determine the availability of funds in the payor's account. When verification is complete, the system generates a paper bank draft payable to the payor, using MICR ink so that the draft can be processed in the banking system like an ordinary check. The signature block of the draft is made for the collection agent "as authorized signatory for" the payor.

ABSTRACT:

A system and method for preparing and electronically delivering a bill to a billed party. The method may comprise receiving from a billing party an electronic bill file, preparing a redacted bill file from the electronic bill file by redacting selected secured billing information from the electronic bill file, sending the redacted bill file electronically to the billed party, and preparing and outputting a reconstructed bill at the billed party's computer by inserting the selected secured billing information into the redacted bill file. The act of preparing and outputting a reconstructed bill may further comprise the act of inserting standard bill components into the redacted bill file to create a reconstructed bill.

## ABSTRACT:

An apparatus, system and method for providing real-time foreign exchange information, cross-border payments, and other financial information and services to clients over the World Wide Web. Real-time foreign exchange rate quotes are provided that may be relied on in timing international transactions to a benefit of a consumer. Single or multiple transactions are automatically converted from a consumer's native currency to any of a plurality of foreign currencies and vice versa, thereby simplifying and facilitating these international transactions.

## RELATED APPLICATIONS

[0001] This application claims the benefit of U.S. Provisional Application No. 60/194,587, entitled System for International Financial Transactions, filed on Apr. 5, 2000.

ABSTRACT:

The present invention, an embodiment of which is known as Crossmar Matching Service (CMS) provides a method and system for matching order routing of securities and other instrument types, and for matching other transaction information on a post-execution basis, such as during the confirmation and settlement phase. The functions of the present invention occur on the post-execution side of the value chain and include matching the financials, matching the delivery instructions, and confirming those deliveries and instructions. The method and system of the present invention thus further provide a confirmation and settlement system for these functions.

TITLE: Method and system for confirmation and settlement for financial transactions matching

Brief Summary Text (5):

Language barriers, time differences and physical distance combined with short settlement periods increase the risks for all security trading participants. While the current suite of electronic trading products have reduced the risk for the investor and the executing broker by automating the confirmation process, none of the products has provided an efficient method for routing settlement instructions to agent banks. Banks are forced to rely on a variety of manual methods for receiving settlement instructions from their counterparties. These settlement instructions are often received by the bank after the trade is supposed to settle and often contain multiple errors. Banks are required to employ large staffs to chase down settlement instructions, repair messages, and to manually match settlement instructions with executing brokers' instructions prior to settlement taking place.

Detailed Description Text (4):

An example of a base system, for which the present invention provides matching order routing and other transaction information, is described in applicants' copending application titled METHOD AND APPARATUS FOR TRADING SECURITIES ELECTRONICALLY having U.S. Ser. No. 08/700,836 filed Aug. 21, 1996, now U.S. Pat. No. 5,787,402 and is referred to as "Global Clear". The functions of Global Clear will be described in conjunction with the functions of the present invention. It will be appreciated by those skilled in the art that the matching system of the present invention is likewise applicable to other financial transactions and other trading systems that necessitate a matching method and system, as well as other activities amenable to matching (e.g., documentation matching).

Detailed Description Text (167):

"Conditions" specifies an additional transaction or trade condition. One of the following code words may be selected with regard to conditions: 1) AIB--accrued interest calculation basis; 2) BLK--block order; 3) BST--best confirmation price indicator, followed by a Y for yes or an N for no; 4) CBK--commission sharing broker; 5) CBN--trade executed cum bonus; 6) CCP--trade executed cum coupon; 7) CDV--trade executed cum dividend; 8) CRS--cross trade indicator, followed by a Y for yes or an N for no; 9) CSA--commission sharing agent; 10) CSB--commission sharing basis; 11) FRC--free clean settlement; 12) GDL--trade executed with guarantee delivery; 13) MSC--miscellaneous; 14) NTP--net price; 15) POS--position; 16) SDL--trade executed with a special delivery; 17) SDT--requested settlement date; 18) SEM--trade executed by a stock exchange member; 19) SLC--trade executed in a special location; 20) SRO--trade executed under rules of the self regulatory organization; 21) XBN--trade executed ex bonus.; 22) XCP--trade executed ex coupon; and 23) XDV--trade executed ex dividend.

ABSTRACT:

An online centralized financial products exchange system. The invention is a system, method and computer program product that creates a "marketplace" for end-to-end financial products life cycle transactions. More particularly, the invention provides a centralized exchange system for the trading of loans. The system includes a plurality of Web servers for receiving and providing loan information from and to subscribers on several Web clients and a database server for searching the pre-set rules to match potential buyers with sellers. The system also includes a database for storing information relating to negotiations (i.e., bidding) for the sale of loans and for storing pre-set rules for pre-registered buyers and sellers. The system further includes a database and server for storing risk/return information that is made available to subscribers for analysis.

ART-UNIT: 278

PRIMARY-EXAMINER: Poinvil; Frantzy

ATTY-AGENT-FIRM: Marcou; George T. Kilpatrick Stockton LLP

ABSTRACT:

A method for integrating a plurality of financial services provided at different geographical locations and in different time zones, and electronic delivering such services directly to a customer facility at any time requested by the customer. Customers connect to the system whenever desired to access each of the services, and messages are stored and routed between the customers and each of the service providers at the respective times when the customers' facilities and the service providers' facilities are operative. The system can interface with a customer's stand-alone personal computer, local area network, and/or mainframe computer. A variety of security functions provide different levels of access to the services for different customers.

DOCUMENT-IDENTIFIER: US 6058378 A

TITLE: Electronic delivery system and method for integrating global financial services

Brief Summary Text (8):

Each of these products and services has many different subcategories. For example, cash management services include funds transfers, money market transactions, stop payment orders, and account balance and activity inquiries. Securities services include securities trading, and services to investors and issuers of securities. Trade finance services include letters of credit, money collection for trade transactions, and trade activity and payment inquiries.

Brief Summary Text (26):

The present invention provides an electronic delivery system that seamlessly interlinks the myriad of existing access services to provide comprehensive financial transaction services from single or multiple customer locations. The system provides "single window" access for a large number of financial products, as well as for multiple geographic regions. For example, a bank may have separate electronic delivery systems that provide cash management, securities, and trade products to its customers, and may have a number of these systems located throughout the world to serve different geographic regions. The present invention delivers the services from all of these existing systems to the customer's work site using a single interface. The integration of data provided by the delivery system empowers the customer with tools to manage their business in new and better ways, such as obtaining a global view of the customer's accounts, manipulating data into customized reports, remotely authorizing transactions, and so forth.
